

# Pacific Trails Resort Case Study

→ main idea: begin with a very basic website, with a few pages, a navigation bar, and some information on each page.

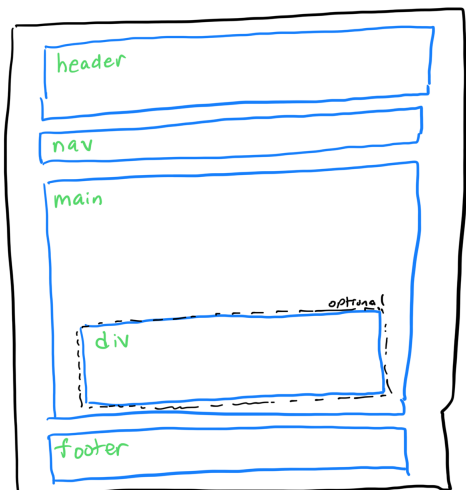

Then continue to develop and improve upon previous versions, using the tools that we learn along the way!

Begin with ~ /cpsc216/ Case Study/  
There are pdf's of four pages from another text book that outline the project.

- ① index.html
- ② yurts.html
- ③ activities.html
- ④ reservations.html

## Page Layout

```
<!DOCTYPE html>
```

```
<html lang = "en">
```

```
<head>
```

```
  <meta charset = "UTF-8">
```

```

<meta ...
<title> Poetic Trails Resort </title>

</head>
<body>
  <header>
    ...
  </header>
  <nav>
    ...
  </nav>
  <main>
    ...
    <div>
      ...
    </div>
  </main>
  <footer>
    ...
  </footer>
</body>
</html>

```

All of the html files for the site will follow this layout!!

For Part I, we will only construct two files: index.html and yurts.htm

## HTML Containers.

There are some tags that can be used to organize page layout:

- |           |                           |
|-----------|---------------------------|
| <header>  | - intro content           |
| <footer>  | - author, ©, date, ...    |
| <address> | - contact info            |
| <main>    | - primary content         |
| <section> | - chapters, etc.          |
| <article> | - self-contained content  |
| <nav>     | - website navigation      |
| <aside>   | - indirect content        |
|           | - ... and block container |

\* <div>

\* <span>

- generic —  
- generic inline container.
