

Zyglab 5.10

1. Let's use an external style sheet, for now.
"Zyglab 5.10.css"
2. Outer container + four verse containers
as `<div>` elements.
3. "Yesterday" is an `<h2>` element.

4. Outer Container → 600 x 280 px
→ two pixel solid border in blue
→ five pixel padding
→ bg color #F0F0F0

h2 {

font-family: Arial;
font-size: 16pt;
font-style: italic;
color: blue;

}

Outer-container {

width: 600px;
height: 280px;
border: 2px solid blue;
padding: 5px;
background-color: #F0F0F0;

}

This much gets us through steps 1 - 5
in the instructions !!

Now, let's add CSS code for each
of the four verse <div>'s.

→ almost all of the CSS style
codes are fairly simple here.

width, height, background-color, color
float, padding, margin - left/right /
top / bottom

→ absolute positioning :

position : absolute.

left : 110 px ;

top : 200 px ;

} relative to
nearest
positional
ancestor
